"Across Australia, early Europeans commented again and again that the land looked like a park. With extensive grassy patches and pathways, open woodlands and abundant wildlife, it evoked a country estate in England. Bill Gammage has discovered this was because Aboriginal people managed the land in a far more systematic and scientific fashion than we have ever realised. For over a decade he has examined written and visual records of the Australian landscape. With details of land-management strategies from around Australia, The biggest estate on earth rewrites the history of this continent, with huge implications for us today." Dust cover. Geographic Name: Australia History. Rubrics Aboriginal people spent far less time and effort than Europeans in securing food and shelter, and this book reveals how. Once Aboriginal people were no longer able to tend their country, it became overgrown and vulnerable to the hugely damaging bushfires Australians now experience. With details of land-management strategies from around Australia, this book rewrites the history of the continent, with huge implications for today. Year: 2012. Language: english.
