### Abstract:

The thesis reflects my personal journey to the hidden worlds, located in the realm of the inner space. These worlds are accessed by alteration of the consciousness, which travels nonlinearly and expresses itself in various ways, presented as separate zones in the book. The zones are related to the six intermediate states in Tibetan Buddhism - birth and life, meditation, dreams, time of death, second stage of the death process and rebirth.

The intention of the thesis is to take the reader on a journey and make him simultaneously a participant and observer. Different styles of writing are incorporated in order to place the reader straight in the map of the inner space.

The thesis illustrates the idea of the multidimensional body of the future, which has subtle layers and selves, existing in different dimensions. Death, rebirth and eventually immortality are part of the construct of this body.

The art works included in the thesis explore the hidden worlds and give the reader an idea about their content.

task, but inhabitants of a few worlds—including Golarion—have achieved space travel, whether by spell, spaceship, a combination of the two, or other mysterious means. Golarion's peoples have not developed the technological capacity to leave Golarion, but some have deployed powerful—if unstable—magical transports. For thousands of years, voyagers of inner space—spiritual seekers, shamans, and psychoactive drug users—have returned from their inner imaginal travels reporting encounters with alien intelligences. Inner Paths to Outer Space presents an innovative examination of how we can reach these other dimensions of existence and contact otherworldly beings. Based on their more than 60 combined years of research into the function of the brain, the authors reveal how psychoactive substances such as DMT allow the brain to bypass our five basic senses to unlock a multidimensional realm of existence where
