Abstract

Due to increasing requests for protein electrophoresis, a modern private laboratory developed new tools used for the investigation of plasma cell myeloma (multiple myeloma). This involved the introduction of newer more efficient instrumental technology and moving from paper based record keeping systems to a sophisticated electronic data storage system. Central to this system is the graphic user interface which allows the rapid sharing of data between the laboratory information system, instrumentation and electronic worksheets. The electronic format of data storage has permitted the development of rapid data retrieval for access to pertinent information for the correlation of protein study results at the touch of a button. This new system of efficient data retrieval permits increased productivity and the delivery of high quality results in a complex area of analysis that requires correlation of many results.

Item Details

Item Type:	Letter or Note in Journal
Keywords:	Haematology, paediatric
Research Division:	Medical and Health Sciences
Research Group:	Cardiorespiratory Medicine and Haematology
Research Field:	Haematology
Objective Division:	Health
Objective Group:	Clinical Health (Organs, Diseases and Abnormal Conditions)
Objective Field:	Blood Disorders
UTAS Author:	Adams, MJ (Dr Murray Adams)
ID Code:	108051
Year Published:	2016
Deposited By:	Health Sciences
Deposited On:	2016-04-05
Last Modified:	2016-04-08
Downloads:	0

V. R. Breakey, S. Revel-Vilk, L. R. Brandao. This updated and extended edition of the SickKids Handbook takes the reader through the entire field of pediatric thrombosis and hemostasis. An introductory section concisely explains the complex pathophysiology of thrombosis and hemostasis. The chapters that follow include practical, evidence-based information on the diagnosis and management of inherited and acquired bleeding disorders and thrombotic events of the venous, arterial, cardiac and central nervous systems that affect children. Special features include practical clinical algorithms and a Written and reviewed by international experts in the field, this handbook is intended for health care professionals involved in the assessment and care of children with inherited and acquired bleeding and clotting disorders, including general and specialist pediatricians (in particular intensivists, neonatologists, cardiologists/cardiac surgeons, rheumatologists and nephrologists), hematologists/oncologists (pediatric and adult), as well as medical trainees, nurses, nurse practitioners and pharmacists. Recommended. Free PDF SickKids Handbook of Pediatric Thrombosis and Hemostasis Books OnlineEducation. Hemostasis/Thrombosis I Normal Hemostasis/Thrombosis; Assessment of Clotting System.Documents. Consultative Hemostasis and ThrombosisDocuments. An expertly written, practical handbook for the clinical assessment and management of children with inherited or acquired bleeding and clotting disorders.
